*The intent of mentorship is to provide residents with faculty members to have as a resource in developing their Urologic careers (clinical) and research projects.

Meetings with residents should occur at least once every 4 months to discuss their progress in the program. The meetings should be documented with a brief summary of the goals discussed and an action plan as needed. Notes from these meetings will be kept in the resident's training files. Switching mentors is OK as long as an individual faculty member is not overburdened. Specific forms can be developed for use with the meetings if desired. It is also encouraged for faculty to be the individual resident's advocate and assist with other issues as they arise. It is the responsibility of the resident to reach out to their mentors to schedule meetings.
